Introduction:

We can provide you with rotors and stators; The products have high performance, high rotate speed, high precision, and high corrosion resistance. They can be sold with motor shaft in complete sets. We can provide you the optimized motor magnetic application solution with many years magnetic application experience.

- Injection plastic glue iron part and shaft together with bonded NdFeB magnets.
- ABM is experienced in fabricating permanent magnet rotor for stepper motor. The rotor demonstrates excellent performance in torque and noise thanks to the magnetizing technology.

Metal shaft plastic gear could be integrated in the magnet rotor.
Applications:

Rotor and stator for model motor and industrial BLDC motor, fixed by shaft & sintered NdFeB, injection ferritebonded NdFeB and SmCo magnets with ring iron sleeve.
